(54) Title: PICTURE FRAME ASSEMBLY FOR MOUNTING TO A CYLINDRICAL OBJECT

(57) Abstract: A picture frame assembly includes a back-
ing plate having a front surface, a rear surface, and a plurality
of parallel grooves in one of the surfaces. The material and
thickness of the backing plate are chosen so that the backing
plate may be plastically deformed about a bending axis paral-
lel to the grooves. At least one frame element, which may be
formed integrally with the backing plate, is provided for
retaining a planar picture element against the front surface of
the backing plate. A pair of tack elements extending from
the rear surface are provided for mounting the assembly to a
cylindrical object such as a tree or a candle.
